SPECIFICATION GUIDE
DESIGN TEMPLATES

## TEMPLATES, LEGENDS, & LAND F/X DATA

Quick Start Guide

THIS PLAN IS PROVIDED BY K-RAIN AS A DESIGN GUIDE ONLY AND OFFERS NO GUARANTEE FOR PROJECTS INSTALLED FROM THIS PLAN. DUE TO MULTIPLE VARIABLES RELATED TO PROJECT CONDITIONS, K-RAIN RECOMMENDS THAT A QUALIFIED IRRIGATION DESIGNER BE CONSULTED.
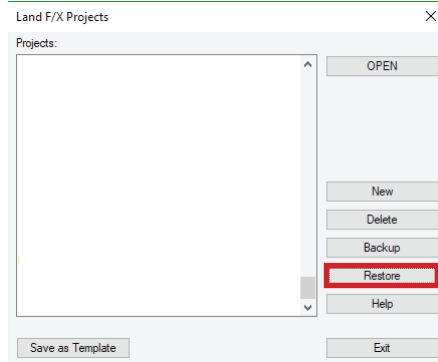

Importing K-Rain Project Template

To create a template from the .lfx file provided, first you must **Import the Project Data to create a New Project**. You will then save the project as a template.

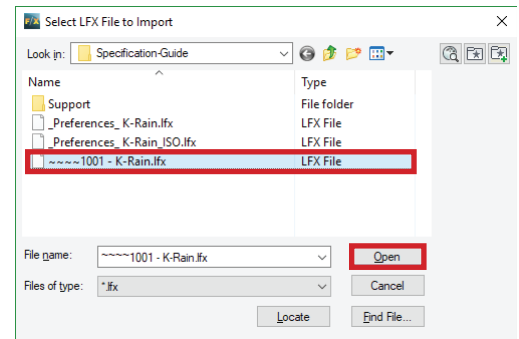

Open the **Projects** tool, the **Land F/X Projects** dialog box will open. Click restore.

The **Restore Project** dialog box will open. Click **Import**.

The system will browse automatically to the folder containing the .dwg file you currently have open. Browse to the **.lfx** file on the K-Rain Flash Drive. Select that file and click **Open**.

You can use this project as a starting point, or you can continue along to create a template that can be used in Land F/X for creating new projects or importing the data into existing projects. Please remember to reach out to your area K-Rain representative to ensure you are specifying the latest equipment.

Open the **Projects** tool, the **Land F/X Projects** dialog box will open. Select your project. Then click **Save as Template**.

Type a name for your template in the dialog box that opens. Click **OK** when finished.

The project will now be saved as a template, under a sublist in your projects titled **Templates**.
